Laparoscopic surgery, also called minimally invasive surgery (MIS), bandaid surgery, or keyhole surgery, is a modern surgical technique in which operations are performed far from their location through small incisions (usually 0.5–1.5 cm) elsewhere in the body.

There are a number of advantages to the patient with laparoscopic surgery versus the more common, open procedure. Pain and hemorrhaging are reduced due to smaller incisions and recovery times are shorter.

Chirag Laproscopic instruments are part of Laproscopic surgery system setup.

We are pleased to introduce the New Chirag Laparoscopic instrument line, which offers a full selection of the most popular patterns of precision graspers, dissectors, scissors, needle holders, biopsy forceps, retractors and specialty instruments.

Our ergonomic one-piece design offers greater ease of use by eliminating the potential for lost or mis-matched components as well as the lengthy disassembly and reassembly time needed for modular designs. 360° full rotation with brake feature, monopolar hook-up for reliable electro-surgical use, durable insulation, and are fully autoclavable.
